

Profile

DevOps Package Name : CDM - Task Management

This Form was created in order to have an overview and access to configure the Profiles.

1. Prerequisites for using business component

Common Data Model Installed

2. Print screens and Business Description and few words for where you can use it

In this form is displayed the name of the profile and the filters attached to it.

Profiles help identify the type of work an operator will do and segregate different groups of users. For example, we might have operators in charge of Black List validations and another group of users in charge of high risk verifications. An operator must have at least one profile assigned to them. This function can also configure a user to have multiple profiles, for example, a user can have a black list profile and a high risk profile too and in that case he's eligible to operate tasks from both categories. Profiles can be setup using the [filers](#) provided.

3. Steps of the business component

4. Banking Control Panel Parameters used for the business component

None

5. Database model

- FTOS_CMB_Profile

6. Libraries used and why

None

7. Server Scripts

None

8. Stored Procedures

None

9. Filtered fields

None

10. Validations and Actions performed with Field Options

- Name - Required

11. Actions called by the component , why and where

None

12. Processors called by the component , why and where

None

13. Validations to go forward

None

14. Actions triggered by Row Double Click

None

15. Style Sheets used and where

None
